

Secure-FEPRH — Feature Overview (Quick Reference)

Previous students built a basic code repository and English-only text similarity checker.

We are extending it with Cybersecurity, Computer Vision, and Arabic NLP — adding **8 new features**.

Enhanced (From Previous Project)

#	Feature	What's New
1	Text Similarity Check	Added Arabic language support (the majority of proposals are in Arabic)
2	Code Repository	Added encryption, file validation, malware blocking, and version history

Completely New Features

#	Feature	One-Line Description
3	Face Authentication (MFA)	Login requires face scan via webcam + liveness check (anti-spoofing)
4	Role-Based Access Control	Students, Supervisors, and Department Head each have strict, enforced permissions
5	Code Plagiarism Detection	Detects copied code even when variable names are changed (structural analysis)
6	Smart Attendance	Camera auto-identifies attendees during discussion sessions — no paper sheets
7	Kanban Task Board	Trello-like board for supervisors to track student progress week by week

#	Feature	One-Line Description
8	Notifications & Alerts	Auto-alerts for deadlines, feedback, and suspicious login attempts
9	Analytics Dashboard	Visual charts for the Department Head (project stats, similarity trends, workload)
10	Security Hardening	Rate limiting, encrypted sessions, input sanitization, and full audit logs

Total: 2 enhanced + 8 new = 10 features covering Web Development, AI, and Cybersecurity.
